BRAND EVN

Monday 14 Mar 2016 at 10:20 (00h15')

Content :

Multi-band concurrent observation capability for the frequencies bands commonly used in EVN greatly could improve the VLBI scientific opportunities, even enabling important simplification in the radiotelescope operations. The project for a 1.5 - 15.5 GHz fully digital receiver is presented with the possible solutions for a smooth introduction in the different from each other EVN radiotelescopes.

Primary authors : Dr. TUCCARI, Gino (INAF-IRA and MPI)

Co-authors : Dr. ALEF, Walter (Max Planck Institute fuer Radioastronomie)

Presenter : Dr. TUCCARI, Gino (INAF-IRA and MPI)

Session classification : Oral1: Advances in VGOS Stations and Technology

Track classification : 1: Advances in VGOS Stations and Technology

Type : Oral Presentation
