Constraints on new hypothetical particles in the Higgs sector using LHC Run 1 and 2 data

Thursday 07 Jul 2016 at 11:30 (00h20')

Abstract :

With Run 2 of the LHC currently underway at a record-breaking energy of 13 TeV centre of mass energy, new physics searches have come to the fore. In particular, the ATLAS and CMS collaborations are beginning to focus more on extending the Higgs sector of the Standard Model. Previous work has shown that Run 1 data from both ATLAS and CMS hint at the existence of a new heavy scalar with a mass around 270 GeV. This work will extend this idea by introducing a full Two-Higgs Doublet Model and outlining the potential Run 2 searches which could constrain the parameters of such a model, should it exist in nature. This will be presented in the context of searches for Higgs production in association with missing energy, leptons and large jet multiplicities. Some preliminary studies related to the rates and kinematic distributions of processes of interest are presented and their implications are discussed.

Award :

Yes

Level :

MSc

Supervisor :

Bruce Mellado, Bruce.Mellado@wits.ac.za

Paper :

Yes

Permission :

Yes

Primary authors : Mr. VON BUDDENBROCK, Stefan (University of the Witwatersrand)

Co-authors : Dr. KUMAR, Mukesh (University of the Witwatersrand) ; Prof. MELLADO, Bruce (University of Wisconsin - Madison) ; Prof. CORNELL, Alan (NITheP) ; Mr. REED, Robert (University of Witwatersrand) ; Dr. RUAN, XIFENG (WITS) ; KAR, Deepak (University of Witwatersrand)

Presenter : Mr. VON BUDDENBROCK, Stefan (University of the Witwatersrand)

Session classification : Nuclear, Particle and Radiation Physics (1)

Track classification : Track B - Nuclear, Particle and Radiation Physics

Type : Oral Presentation
