Optical tweezing, guiding, sorting and transfection of mammalian cells

Thursday 12 Jul 2012 at 16:40 (00h20')

Abstract :

Recently, laser light sources of different regimes have emerged as an essential tool in the biophotonics research area. Classic applications include, for example: manipulating single cells and their sub-cellular organelles, sorting cells in microfluidic channels and the cytoplasmic delivery of both genetic and non-genetic matter of varying sizes into mammalian cells. In this talk several new findings specifically in the optical cell tweezing, guiding, sorting and transfection study fields are presented.

Award :

No

Paper :

No

Primary authors : Dr. MTHUNZI, Patience (CSIR - NLC)

Co-authors :

Presenter : Dr. MTHUNZI, Patience (CSIR - NLC)

Session classification : Biophysics

Track classification : Track F - Applied Physics

Type : Oral Presentation
