Synthesis and characterization of magnetron sputter deposited Ge-nanowires.

Tuesday, 9 July 2013 17:40 (1 hour)

Abstract content
 (Max 300 words)

Ge nanowires were synthesized on Si<100> substrates using Ag as a catalyst. The catalyst seeds were sputter deposited on the Si substrate at 2×10^{-2} Torr and thereafter Ge was deposited. The catalytic effect of Ag to form nanowires of Ge was tested by looking at the samples using both SEM and AFM. Rutherford Backscattering Spectrometry (RBS) was also used to characterize the samples.

Apply to be
 considered for a student
 award (Yes / No)?

Yes

Level for award
 (Hons, MSc,
 PhD)?

MSc

Main supervisor (name and email)
and his / her institution

Prof Muzi Ndwanwe ndwandweO@unizulu.ac.za

Would you like to
 submit a short paper
 for the Conference
 Proceedings (Yes / No)?

Yes

Primary authors: Mr THETHWAYO, Charles Thulani (University of Zululand); Mr NYAWO, Thembinkosi (University of Zululand)

Co-authors: Prof. NDWANDWE, Muzi (University of Zululand); Ms CHONCO, Nelisiwe (University of Zululand); Mr SEFAGE, Percy (University of Zululand)

Presenters: Mr THETHWAYO, Charles Thulani (University of Zululand); Mr NYAWO, Thembinkosi (University of Zululand)

Session Classification: Poster1

Track Classification: Track A - Division for Condensed Matter Physics and Materials
