Type: **Poster Presentation**

Quark Gluon Plasma (QGP)

Wednesday, 10 July 2013 17:40 (1 hour)

**Abstract content
 (Max 300 words)**

Ultra-relativistic heavy ion collisions are a unique tool to study the de-confined phase of matter which is thought to have existed a few microseconds after the big bang. Different observables are suggested to characterize this new phase of matter. This presentation will focus on some of these observables.

**Apply to be
 considered for a student
 award (Yes / No)?**

No

**Would you like to
 submit a short paper
 for the Conference
 Proceedings (Yes / No)?**

No
