Characterization of the 2^+ excitation of Hoyle state in ^{12}C

Tuesday, 9 July 2013 10:30 (20 minutes)

Abstract content
 (Max 300 words)

Even though numerous investigations have been performed to study the ^{12}C nucleus in the past, questions still remain regarding some of its unbound states. One of the mysteries of this nucleus involves the 0^+2 , $E_x = 7.654$ MeV state also known as the Hoyle state. This state was first predicted by Fred Hoyle [1] in 1954 and discovered three years later [2]. Through several theoretical and experimental studies, it has been reported that it possesses an α -cluster structure. One of the long standing problems is connected with the existence of a 2^+ excited state build upon the Hoyle state. Recently the search for this state has attracted much interest both theoretically and experimentally, leading to several candidates of this state reported in Ref [3,4,5,6]. Up to date, there are still questions regarding the exact nature of this state.

This talk gives an overview of the preliminary results of the $^{14}\text{C}(p,t)^{12}\text{C}[\alpha\alpha\alpha]$ reaction. The experiment was performed at iThemba LABS, with the high resolution magnetic spectrometer in conjunction with particle telescopes consisting of silicon detectors. The telescopes were placed in the target chamber and their primary use was to detect alpha particles to identify the break up decay path of ^{12}C , while the spectrometer was used to detect the ejectile (triton) to determine the excitation energy with high resolution.

Apply to be
 considered for a student
 award (Yes / No)?

yes

Level for award
 (Hons, MSc,
 PhD)?

PhD

Main supervisor (name and email)
and his / her institution

Prof Paul Papka, papka@sun.ac.za, University of Stellenbosch

Would you like to
 submit a short paper
 for the Conference
 Proceedings (Yes / No)?

Primary author: Mr NEMULODI, fhumulani (University of Stellenbosch)

Co-authors: Dr SMIT, Frederick (iThemba LABS); Dr USMAN, Iyabo (University of the Witwatersrand); Mr SWARTZ, Jacobus (University of Stellenbosch); Prof. PAPKA, Paul (University of Stellenbosch); Dr NEVELING, Retief (iThemba LABS)

Presenter: Mr NEMULODI, fhumulani (University of Stellenbosch)

Session Classification: NPRP

Track Classification: Track B - Nuclear, Particle and Radiation Physics
