We report on research carried out to improve teaching and student engagement in the introductory astronomy

course at the University of Cape Town. We describe the development of an instrument, the Introductory Astronomy Questionnaire (IAQ), which we administered as pre- and post-tests to students enrolled in the course

The instrument comprised a small number of questions which probed three areas of interest: student motivation

and expectations, astronomy content, and worldview. Amongst our findings were that learning gains were made in several conceptual areas, and that students appeared to develop a more nuanced view of the nature of

astronomy. There was some evidence that the course had a positive impact on students' worldviews, particularly

their attitudes towards science.

Apply to be
br> considered for a student
br> award (Yes / No)?

NO

Level for award

- (Hons, MSc,

- PhD)?

NA

Would you like to
 submit a short paper
 for the Conference
 Proceedings (Yes / No)?

No
