## Angular Accelerating White Light

Wednesday, 1 July 2015 10:00 (20 minutes)

**Abstract content** (Max 300 words) **Formatting & Special chars**

Significant interest has been devoted to tailoring optical fields that transversely accelerate during propagation in the form of Airy, Weber and Mathieu beams. In this work, we introduce a new type of optical field that exhibits controlled angular acceleration during propagation which is achieved by superpositions of Bessel beams with non-canonical phase functions. We demonstrate these angular accelerating fields by modulating the phase and amplitude of a supercontinuum source with the use of a phase-only spatial light modulator (SLM). We illustrate that by considering only the first diffraction order when the SLM is encoded with a blazed grating, the SLM is capable of tailoring the spatial profile of broadband sources without any wavelength dependence. By digitally simulating free-space propagation on the SLM, we compare the effects of real and digital propagation on the angular rotation rates of the resulting optical fields for various wavelengths. The development of controlled angular accelerating optical fields will be useful in areas such as particle manipulation, plasma control, material processing and non-linear optics.

**Apply to be considered for a student award (Yes / No)?**

No

**Level for award (Hons, MSc, PhD, N/A)?**

NA

**Main supervisor (name and email) and his / her institution**

NA

**Would you like to submit a short paper for the Conference Proceedings (Yes / No)?**

No

**Please indicate whether this abstract may be published online (Yes / No)**

Yes

**Primary author:** Dr DUDLEY, Angela (CSIR National Laser Centre)

**Co-authors:** Prof. SZAMEIT, Alexander (Institute of Applied Physics, Abbe Center of Photonics, Friedrich-Schiller-Universität, Jena, Germany); Prof. FORBES, Andrew (CSIR); Mr VETTER, Christian (Institute of Applied Physics, Abbe Center of Photonics, Friedrich-Schiller-Universität, Jena, Germany)

**Presenter:** Dr DUDLEY, Angela (CSIR National Laser Centre)

**Session Classification:** Photonics

**Track Classification:** Track C - Photonics
