In the year 2022 the Large Hadron Collider at CERN is scheduled to undergo a major upgrade. A large proportion of the current front-end electronics, on the Tile Calorimeter sub-detector, will be upgraded and relocated to the back-end. A demonstrator program has been established as a proof of principle. A new system will be required to house, manage and connect this new hardware. The proposed solution is an Advanced Telecommunication Computing Architecture (ATCA) which will not only house but also allow advanced management features and control at a hardware level by integrating the ATCA chassis into the Detector Control System. A framework tool has been developed to automate and facilitate this integration effort.

**Apply to be
 considered for a student
 award (Yes / No)?**

Yes

**Level for award
 (Hons, MSc,
 PhD, N/A)?**

PhD

**Main supervisor (name and email)
and his / her institution**

Prof. Bruce Mellado
Bruce.Mellado@cern.ch
University of the Witwatersrand

**Would you like to
 submit a short paper
 for the Conference
 Proceedings (Yes / No)?**

Yes

**Please indicate whether
this abstract may be
published online
(Yes / No)**

Yes
