Hong-Ou-Mandel (HOM) interference is a fundamental component in many quantum information protocols and one of the defining features of quantum science. Traditional HOM measurements are implemented in two-dimensional Hilbert spaces and are used to filter antisymmetric components from an input state. Here, we extend the concept of HOM interference to photons entangled in high dimensions, implementing a HOM measurement for orbital angular momentum (OAM) states. In this manner, we are able to filter the antisymmetric components from a high-dimensional entangled field. We use Dove prisms to control the precise form of the high-dimensional two-photon state and reveal state-specific constructive and destructive quantum interference. This work paves the way for high-dimensional processing of multi-photon quantum states, for example, in teleportation beyond qubits.

**Apply to be considered for a student award (Yes / No)?**

no

**Level for award (Hons, MSc, PhD, N/A)?**

n/a

**Would you like to submit a short paper for the Conference Proceedings (Yes / No)?**

no

**Please indicate whether this abstract may be published online (Yes / No)**

yes

**Primary author:** Dr ZHANG, Yingwen (CSIR)

**Co-authors:** Prof. FORBES, Andrew (WITS); Dr ROUX, Filippus (CSIR National Laser Centre); Dr LEACH, Jonathan (IPaQS, SUPA, Heriot-Watt, United Kingdom); Ms AGNEW, Megan (IPaQS, SUPA, Heriot-Watt, United Kingdom); Prof. KONRAD, Thomas (UKZN)

**Presenter:** Dr ZHANG, Yingwen (CSIR)

**Session Classification:** Photonics

**Track Classification:** Track C - Photonics
