A quantum walk-based MPPT optimization algorithm for a stand-alone PV system

Wednesday, 1 July 2015 16:10 (1h 50m)

Abstract content (Max 300 words)
Formatting & Special chars

A novel quantum walk-based maximum power point tracking (MPPT) optimization algorithm for stand-alone photovoltaic (PV) system is proposed in this paper. A quantum walk is a quantization of a classical random walk algorithm. Since a classical random walk has proven to be a very powerful algorithmic tool, it is prudent then to investigate its quantum analogue, namely a quantum walk, for design of algorithms. The paper further provides a numerical analysis of the algorithm in order to determine its suitability as an MPPT optimization algorithm. Simulation results show that this quantum walk-based algorithm can quickly reach maximum power point (MPP), thereby reducing PV system power loss.

Apply to be considered for a student award (Yes / No)?

No

Level for award (Hons, MSc, PhD, N/A)?

PhD

Main supervisor (name and email) and his / her institution

Prof. Francesco Petruccione (petruccione@ukzn.ac.za),
 University of KwaZulu-Natal

Would you like to submit a short paper for the Conference Proceedings (Yes / No)?

Yes

Please indicate whether this abstract may be published online (Yes / No)

Yes

Primary author: Mr SENEKANE, Makhamisa (Quantum Research Group, School of Chemistry and Physics, University of KwaZulu-Natal, Private Bag X54001, Durban 4000, South Africa)

Co-authors: Mr ZULU, Bheki (Student); Prof. PETRUCCIONE, Francesco (UKZN)

Presenter: Mr SENEKANE, Makhamisa (Quantum Research Group, School of Chemistry and Physics, University of KwaZulu-Natal, Private Bag X54001, Durban 4000, South Africa)

Session Classification: Poster2

Track Classification: Track F - Applied Physics
