High resolution radio imaging of Active Galactic Nuclei (AGN) jets has revealed that there are complex small scale structures, such as radio knots, present in the relativistic outflows. With continuous observation of these sources we note that the structures are highly time dependent. In order to gain a better understanding of how these structures form and evolve it is necessary to build a numerical model of the system. Due to the large length scales of astrophysical processes compared to particle interaction scales we can treat most of these processes as neutral fluids and use hydrodynamical conservation laws to obtain an appropriate model. In this study the opensource magnetohydrodynamical code PLUTO will be used to create a numerical model of relativistic AGN outflows. The PLUTO code uses High Resolution Shock Capturing (HRSC) schemes to evolve the time dependent partial differential conservation equations on a structured mesh. The magnetohydrodynamical code can be used to simulate a large number of other astrophysical environments such as accretion disks around compact objects. In this paper we present our initial model for the creation of a relativistic hydrodynamical jet and compare it to models obtained in previous studies. We will also present some of possibilities for future simulations.

Apply to be considered for a student award (Yes / No)?

Yes

Level for award (Hons, MSc, PhD, N/A)?

MSc

Main supervisor (name and email) and his / her institution

B. van Soelen
 vansoelenb@ufs.ac.za
 Department of Physics, UFS

Would you like to submit a short paper for the Conference Proceedings (Yes / No)?

Yes

**Please indicate whether
this abstract may be
published online
(Yes / No)**

Yes

Primary author: Mr VAN DER WESTHUIZEN, Izak (University of the Free State)

Co-authors: Dr VAN SOELEN, Brian (UFS); Dr BEALL, Jim (St. John's Collage, Annapolis, MD); Prof. MEINTJES, Pieter (UFS); Mr RIEKERT, Stephanus (UFS)

Presenter: Mr VAN DER WESTHUIZEN, Izak (University of the Free State)

Session Classification: Poster2

Track Classification: Track D1 - Astrophysics
