Jet substructure techniques for identifying boosted bosons in ATLAS

Tuesday, 5 July 2016 10:20 (20 minutes)

Abstract content
 (Max 300 words)

Special chars

At LHC Run 2, many heavy particles decaying to jets can be identified with jet substructure techniques. Various techniques for reconstructing boosted bosons were used in LHC Run 1 at ATLAS, and they are being tested with the Run 2 data. Some early results comparing signal and background shapes from these techniques will be shown, with comments on their possible usage on new physics searches.

Apply to be
 considered for a student
 award (Yes / No)?

Yes

Level for award
 (Hons, MSc,
 PhD, N/A)?

Hons

Main supervisor (name and email)
and his / her institution

Dr. Deepak Kar; deepak.kar@cern.ch; University of the Witwatersrand

Would you like to
 submit a short paper
 for the Conference
 Proceedings (Yes / No)?

Yes

Please indicate whether
this abstract may be
published online
(Yes / No)

Yes

Primary author: Ms MOODLEY, Chane Simone (University of the Witwatersrand)

Co-author: Dr KAR, Deepak (University of the Wiwatersrand)

Presenter: Ms MOODLEY, Chane Simone (University of the Witwatersrand)

Session Classification: Nuclear, Particle and Radiation Physics (1)

Track Classification: Track B - Nuclear, Particle and Radiation Physics
