## **Getting WISE on Star Formation**

Thursday, 7 July 2016 10:00 (20 minutes)

# Abstract content <br> &nbsp; (Max 300 words)<br><a href="http://events.saip.org.za/getFile.py/a target="\_blank">Formatting &<br>Special chars</a>

In order to understand the evolution of a galaxy, it is essential to determine its star formation properties as well as its growth in stellar mass over cosmic timescales. <i>WISE</i>, the all-sky, mid-infrared survey, affords us the opportunity to investigate both these parameters for galaxies with a wide range of morphologies, activity types, and stellar masses.

In this talk, I will discuss our investigation of the two WISE star formation indicators at 12 (W3) and 22 (W4) microns, using ancillary data from the <i>Spitzer</i> Infrared Nearby Galaxy Survey (SINGS).

I will present results on the reliability of W3 as a star formation indicator, introduce a new star formation rate (SFR) relation based on our analysis, as well as a comparison of existing SFR relations to our new relation. I will also comment on future work to be done on the spatially detailed, albeit qualitative, analysis of a few selected well-resolved galaxies to investigate local star formation processes.

### Apply to be<br> considered for a student <br> &nbsp; award (Yes / No)?

Yes

### Level for award<br>&nbsp;(Hons, MSc, <br> &nbsp; PhD, N/A)?

MSc

### Main supervisor (name and email)<br>and his / her institution

Prof. T. Jarrett jarrett@ast.uct.ac.za University of Cape Town

# Would you like to <br> submit a short paper <br> for the Conference <br> Proceedings (Yes / No)?

No

# Please indicate whether<br>this abstract may be<br>published online<br>(Yes / No)

Yes
