“Analysis of the rich optical iron-line spectrum of the x-ray variable I Zw 1 AGN 1H0707-495”,

Author: H Winkler

Responses to Referee regarding layout

Referee comment	Response to comment
It should be noted that the word template specifies that there should be no spacing between section or subsection headings. This should be corrected!	Removed gap between section 3 heading and subsection 3.1 heading

Responses to Referee 1

Referee comment	Response to comment
The referee thought there was an error in the sentence: “This contrasts with the in comparison quite moderate optical luminosity variations”	The referee misunderstood the sentence, partly because “in comparison” is not the best wording (“by comparison” is better). To clarify the sentence, it was changed to: “This contrasts with optical luminosity variations that are quite moderate by comparison”

Responses to Referee 2

Referee 2 accepted the paper as is.
