

### **Biophysics workshop and session during 2013 Annual Conference**

The Annual Conference of the SAIP this year will be hosting both a workshop and conference sessions on biophysics.

On 8 July 2013 the day-long Biophysics Workshop will consist of a series of presentations introducing aspects of spectroscopy, imaging, photonics, optical manipulations, and modelling in biological systems. We invite all interested students and researchers to attend the event of which the object is to introduce the subject matter to a broad community of researchers.

We also encourage all students and researchers working on any aspects of physics in biological systems to submit abstracts for oral presentations for the biophysics sessions of the Annual Conference. Formally the session will run as a part of the sessions of the Division of Applied Physics for registration and scheduling purposes. However, biophysics contributions may come from any specialisation (not only applied physics). **Presentations from students are especially welcome and prizes for the best student presentations in biophysics on the M.Sc. and Ph.D. level will be awarded.**
