## The effect of photobiomodulation at 660 nm on the differentiation of diabetic wounded WS1 human fibroblasts into myofibroblasts

Friday, 29 June 2018 12:20 (20 minutes)

Diabetes is associated with complicated wound healing and rapid wound progression which may be due to cells that fail to proliferate and differentiate, thus leading to ulcers and limb amputations. The administration of photobiomodulation (PBM) has been associated with increased cellular proliferation, a decrease in wound repair duration and an increase in wound flexibility. Most studies performed on PBM and myofibroblasts dwell mostly on fibrosis, and a minority of studies have investigated fibroblast differentiation for use in diabetic wound healing. This study aimed to determine the effect of PBM at 660nm with 5 J/cm<sup>2</sup> on the differentiation of diabetic wounded human fibroblasts at different time points. This was achieved by measuring the expression of the fibroblast surface marker Thy-1 (CD90) by flow cytometry, proto-myofibroblast marker EDA fibronectin (EDA-FN) by ELISA, and the myofibroblast marker alpha smooth muscle actin ( $\alpha$ -SMA) by flow cytometry. The measurement of the cellular markers was done at 24, 48 and 72 h. Post-PBM, there was a significant decrease in Thy-1 at 48 and 72 h, an increase in EDA-FN at 48 h, and an increase in  $\alpha$ -SMA at 48 and 72 h. PBM at 660 nm with 5 J/cm<sup>2</sup> stimulates cellular differentiation of diabetic wounded fibroblast cells into myofibroblasts, which contributes to the increased rate of wound healing observed in PBM.

**Please confirm that you have carefully read the abstract submission instructions under the menu item "Call for Abstracts" (Yes / No)**

Yes

**Consideration for student awards**  
**Choose one option from those below.**  
N/A  
Hons  
MSc  
PhD

MSc

**Supervisor details**  
**If not a student, type N/A.**  
**Student abstract submission requires supervisor permission: please give their name, institution and email address.**

Prof. Nicolette N. Houreld  
University of Johannesburg  
Email: nhoureld@uj.ac.za

**Primary author:** Ms MOKOENA, Dimakatso (Laser Research Center, University of Johannesburg)

**Co-authors:** Prof. ABRAHAMSE, Heidi (Laser Research Center University of Johannesburg); Prof. HOURELD, Nicolette Nadene (Laser Research Center University of Johannesburg); Dr DHILLIP KUMAR, Sathish Sundar (Laser Research Center University of Johannesburg)

**Presenter:** Ms MOKOENA, Dimakatso (Laser Research Center, University of Johannesburg)

**Session Classification:** Photonics

**Track Classification:** Track C - Photonics
