Probing the intergalactic magnetic field through observations of high energy gamma-rays produced by electromagnetic cascades.

Tuesday, 26 June 2018 15:00 (2 hours)

Currently there is limited knowledge of the origin of the intergalactic magnetic fields (IGMF) that lie between galaxies, galaxy clusters and cosmic voids. Understanding the origin of the IGMF is a crucial component in models of galaxy and galaxy clusters formation. This magnetic field can be probed indirectly by its effect on electromagnetic cascades initiated by gamma-gamma absorption of very high energy (VHE) gamma-rays, produced in blazars, due to its interaction with the extragalactic background light (EBL). The electron-positron pairs produced via the gamma-gamma absorption interact with the intergalactic magnetic field (IGMF) and can be deviated from their original trajectory path. These pairs can then Compton-scatter off the cosmic microwave background (CMB) to produce high energy gamma-rays that may be detected with Fermi-LAT. The strength of this signal strongly depends on the IGMF strength (B) and the coherence length (L). This secondary gamma-ray emission would be superimposed on the blazar's intrinsic gamma-ray spectrum. A selection of bright blazars will be re-analysed using the upgraded Pass 8 analysis pipeline, to search for this secondary component. This will be used to place constraints on the IGMF strength. The initial results from this project will be presented.

Please confirm that you have carefully read the abstract submission instructions under the menu item "Call for Abstracts" (Yes / No)

Yes

Consideration for student awards Choose one option from those below. N/A Hons MSc PhD

MSc

Supervisor details If not a student, type N/A. Student abstract submission requires supervisor permission: please give their name, institution and email address.

Dr. Brian Van Soelen,
University of the Free state,
Department of Physics,
VanSoelenB@ufs.ac.za

Primary author: Mr BISSCHOFF, Brandon (University of the Free state)

Co-authors: Dr VAN SOELEN, Brian (University of the Free State); Prof. MEINTJES, Pieter (University of the Free State)

Presenter: Mr BISSCHOFF, Brandon (University of the Free state)

Session Classification: Poster Session 1

Track Classification: Track D1 - Astrophysics
