63rd ANNUAL CONFERENCE OF THE SA INSTITUTE OF PHYSICS

Contribution ID: 116

Type: Poster Presentation

Background estimation for multilepton and *b*-jets analysis at ATLAS at the LHC

Tuesday, 26 June 2018 15:00 (2 hours)

Background estimation is one of the most important aspects for all the analysis at the Large Hadron Collider. This proceeding presents the background estimation for the $A \rightarrow ZH$ search with the heavy scalar, H, decaying into a pair of Higgs, or Madala, S, bosons. The final state for this search is formed by 3 leptons, \geq 2 b-jets and low jet multiplicity. The $t\bar{t}Z$ process is the dominant background contribution for this analysis. The second important background is the WZ for which a control region is defined to check the modeling and the normalization of this process. Finally, processes with fake leptons are expected to have a small contribution, estimated using a data-driven techniques.

Please confirm that you
have carefully read the
abstract submission instructions
under the menu item
"Call for Abstracts"
<b/(Yes / No)

Yes
