QCD Boltzmann Equation: Beyond the Soft-Scattering Approximation

Wednesday, 27 June 2018 11:40 (20 minutes)

Using the case study of a spatially homogeneous many-gluon system, distributed isotropically in momentum space, we will investigate more thoroughly than in the existing literature the evolution of a hot (quark-) gluon plasma from an initial state towards equilibrium. To that end we will investigate the QCD Boltzmann Equation beyond the popular soft-scattering approximation, thereby shedding light on the applicability of previous results in the field.

Please confirm that you have carefully read the abstract submission instructions under the menu item "Call for Abstracts" (Yes / No)

Yes

Consideration for student awards
Choose one option from those below.
N/A
Hons
MSc
PhD

MSc

Supervisor details
If not a student, type N/A.
Student abstract submission requires supervisor permission: please give their name, institution and email address.

Professor Andre Peshier, University of Cape Town - Andre.Peshier@uct.ac.za

Primary authors: Prof. PESHIER, Andre (UCT); Ms MOODLEY, Nicole (University of Cape Town)

Presenter: Ms MOODLEY, Nicole (University of Cape Town)

Session Classification: Theoretical and Computational Physics

Track Classification: Track G - Theoretical and Computational Physics
