Solutions of Einstein-Klein-Gordon equations with logarithmic phantom field

Wednesday, 27 June 2018 14:20 (20 minutes)

We study Einstein-Klein-Gordon equations with a phantom, which is a scalar field with a negative sign in front of the kinetic energy term of its Lagrange density. Such equations can find applications in approximate cosmological models based on a low-energy limit of the superfluid vacuum theory. We show that they have spherically symmetric solutions, and perform their stability analysis.

Please confirm that you have carefully read the abstract submission instructions under the menu item "Call for Abstracts" (Yes / No)

Yes

Consideration for student awards Choose one option from those below.
N/A
Hons
MSc
PhD

N/A

Supervisor details If not a student, type N/A.
Student abstract submission requires supervisor permission: please give their name, institution and email address.

N/A

Primary authors: Dr ZLOSHCHASTIEV, Konstantin (Durban University of Technology); DZHUNUSHALIEV, Vladimir (KRSU)

Presenter: DZHUNUSHALIEV, Vladimir (KRSU)

Session Classification: Theoretical and Computational Physics

Track Classification: Track G - Theoretical and Computational Physics
