## Improving the microhardness and wear resistance of Titanium and Titanium carbide based metal matrix composite

*Tuesday, 10 July 2012 11:00 (20 minutes)*

### Abstract content <br> &nbsp; (Max 300 words)

Titanium metal matrix composite (MMCs) was fabricated on Titanium Alloy (Ti-6Al-4V) substrate with the aim of improving the hardness and wear property for high performance automotive parts using a Rofin Sinar 4 K W Nd: YAG laser. Wear investigations were carried out with the aid of three body abrasion. The results show that the microstructures of fabricated composite consist of homogeneous distribution of TiC particles which were free from cracks. Multiple track deposited systems revealed microhardness increase reaching a peak as high as HV 922.2 for 60% Ti6Al4V + 40%TiC and the least HV 665.3 80% Ti6Al4V + 20%TiC. The wear rate results were low, due to the proper distribution of ceramic particles and increase in the TiC Content in the titanium alloy thereby forming a metal matrix composite.

Keywords: Laser metal deposition, metal matrix composites, Ti6Al4V, Titanium carbide.

### Apply to be<br> consider for a student <br> &nbsp; award (Yes / No)?

Yes

### Level for award<br>&nbsp;(Hons, MSc, <br> &nbsp; PhD)?

MSc

### Main supervisor (name and email)<br>and his / her institution

Dr Patricia A.I. Popoola, PopoolaAPI@tut.ac.za.  
Tshwane University of Technology.

### Would you like to <br> submit a short paper <br> for the Conference <br> Proceedings (Yes / No)?

Yes

**Primary author:** Mr OCHONOGOR, FRANKLIN (Dr Patricia A.I. Popoola)

**Co-authors:** Dr POPOOLA, Abinbola (Dr Patricia A.I. Popoola); Dr MEACOCK, Christopher (Dr Patricia A.I. Popoola); Dr ABDULWAHAB, Malik (Dr Patricia A.I. Popoola); Prof. SISA, Pityana1 (Dr Patricia A.I. Popoola)

**Presenter:** Mr OCHONOGOR, FRANKLIN (Dr Patricia A.I. Popoola)

**Session Classification:** DCMPM1

**Track Classification:** Track A - Division for Condensed Matter Physics and Materials
