The magnetocaloric effect in PrNiSi_2

Thursday, 12 July 2012 11:40 (20 minutes)

Abstract content **
 **(Max 300 words)

The magnetocaloric effect (MCE) in lanthanide based compounds has attracted sustained interest ever since the discovery of the so called 'giant' MCE in $\text{Gd}_5\text{Si}_2\text{Ge}_2$ by Pecharsky and Gshneidner [1]. Apart from its applicability in new energy efficient refrigeration technologies, the MCE is also a useful probe into the magnetic properties of a system. Recent research focuses on the interplay between the MCE and the salient features of f -electron magnetism [2]. In this regard PrNiSi_2 offers an interesting case study. The system orders ferromagnetically below 20K [3,4] contrary to the non-magnetic ground state expected for Pr-ions in a crystalline electric field (CEF) with orthorhombic symmetry [5]. Subsequently a study of the MCE in polycrystalline PrNiSi_2 is presented. An anomalous contribution to the MCE is found above the magnetic phase transition temperature. An explanation of the latter in terms of a strong uniaxial anisotropy resulting from leading terms in the CEF Hamiltonian is forwarded.

Apply to be **
 consider for a student
 **award (Yes / No)?

Yes

Level for award **
 **(Hons, MSc, **
 **PhD)?

PhD

Main supervisor (name and email) **
 and his / her institution**

Prof. A.M. Strydom amstrydom@uj.ac.za University of Johannesburg

Would you like to **
 submit a short paper
 for the Conference
 Proceedings (Yes / No)?**

Yes

Primary author: Mr SNYMAN, JL (University of Johannesburg)

Co-author: Prof. STRYDOM, AM (University of Johannesburg)

Presenter: Mr SNYMAN, JL (University of Johannesburg)

Session Classification: DCMPM2

Track Classification: Track A - Division for Condensed Matter Physics and Materials
