Extensions of THERMUS and its Applications in High Energy Particle collisions

Tuesday, 9 July 2019 11:40 (20 minutes)

We have analyzed and discussed the hadronic abundances measured in Au-Au, p-p and Pb-Pb collisions at RHIC and LHC experiments using THERMUS. The results were obtained with two particle data tables, and their differences were explained. In particular, the data from the RHIC experiment for Au-Au collisions at 130 GeV and 200 GeV were discussed and analyzed. Similarly, using the preliminary particle yield results of p-p collisions at 0.9 TeV and 7 TeV as well as Pb-Pb collision at 2.76 TeV particle yield calculations were presented and the thermodynamic parameters were obtained from the fits.

Apply to be considered for a student award (Yes / No)?

No

Level for award (Hons, MSc, PhD, N/A)?

N/A

Primary author: Dr WORKU, DAWIT (Cape Peninsula University of Technology)

Co-authors: Prof. CLEYMANS, Jean (University of Cape Town); Mr PARADZA, Masimba Wellington (UCT-CERN)

Presenters: Dr WORKU, DAWIT (Cape Peninsula University of Technology); Prof. CLEYMANS, Jean (University of Cape Town); Mr PARADZA, Masimba Wellington (UCT-CERN)

Session Classification: Theoretical and Computational Physics

Track Classification: Track G - Theoretical and Computational Physics
