Suggested steps towards funding an Advanced Light Source Facility on the African Continent

Wednesday, 30 January 2019 15:00 (30 minutes)

In this talk, presented jointly, we will briefly summarize our multi-faceted experience over several decades of building resources to fund ambitious goals.

Some of these goals were establishing a new regional hands-on science center, running an important political campaign and saving a treasured mountain lodge.

We will share the lessons learned of what worked and what didn't work. The major part of our presentation will be a suggested list of steps towards realization of the dream of an AfLS and will conclude with a discussion among session participants.
