## The Extremely Brilliant Source at the ESRF

*Friday, 1 February 2019 14:15 (30 minutes)*

The ESRF Upgrade Programme, started in 2009, and developed in two phases, is delivering a new generation of beamlines and a new X-ray source with qualitatively improved performances compared to what is available today.

With drastically increased brightness and coherence, the soon-coming ESRF Extremely Brilliant Source (EBS) will open new opportunities for synchrotron users. I will review recent progress in the construction and implementation of the EBS programme.

**Primary author:** Dr SETTE, Francesco (European Synchrotron Radiation Facility (ESRF))

**Presenter:** Dr SETTE, Francesco (European Synchrotron Radiation Facility (ESRF))

**Session Classification:** Joint PCCR2 + AflS2 Plenary

**Track Classification:** Common : PCCR2 and AflS2
