## Search for dark sector showering in ATLAS using semi-visible jets

Tuesday, 5 July 2022 11:30 (15 minutes)

Recent studies in particle physics have shown that there are myriad possibilities for strong dark sector studies at the LHC. One signature is the case of semi-visible jets, where parton evolution includes dark sector emissions, resulting in jets overlapping with missing transverse energy. Owing to the unusual MET-along-the-jet event topology, this is mostly an unexplored domain within ATLAS. In this talk, I will discuss the public results of the first t-channel ATLAS search for semi-visible jets, that focussed on overcoming the performance and optimisation challenges associated with such a unique final state, specifically looking at the angle difference between the hardest jet and the missing transverse energy.

### Apply to be considered for a student ; award (Yes / No)?

Yes

### Level for award;(Hons, MSc, PhD, N/A)?

PhD

**Primary author:** SINHA, Sukanya (The University of Witwatersrand)

**Co-author:** KAR, Deepak (University of Witwatersrand)

**Presenter:** SINHA, Sukanya (The University of Witwatersrand)

**Session Classification:** Nuclear, Particle and Radiation Physics

**Track Classification:** Track B - Nuclear, Particle and Radiation Physics
