## In-situ Determination of Radioactivity Levels and Radiological Hazards in and around the Gold Mine Tailings of the West Rand Area, South Africa.

Monday, 4 July 2022 11:30 (10 minutes)

Mining and processing of naturally occurring radioactive materials could result in elevated levels of natural radionuclides in the environment. The aim of this study was to evaluate the radioactivity levels on a large scale in the West Rand District in South Africa, which is dominated by abandoned gold mine tailings and the consequential radiological exposures to members of the public. The activity concentrations of U-238, Th-232 and K-40 in mine tailings, soil and rocks were assessed using the BGO Super-Spec (RS-230) gamma spectrometer. The measured activity concentrations for U-238, Th-232 and K-40 in the studied mine tailings were found to range from 209.95 to 2578.68 Bq/kg, 19.49 to 108.00 Bq/kg and 31.30 to 626.00 Bq/kg, respectively. In surface soils, the overall average activity concentrations were found to be 59.15 Bq/kg, 34.91 and 245.64 Bq/kg for U-238, Th-232 and K-40, respectively. For the rock samples analyzed, the mean activity concentrations were 32.97 Bq/kg, 32.26 Bq/kg and 351.52 Bq/kg for U-238, Th-232 and K-40, respectively. High radioactivity levels were found in mine tailings, with U-238 contributing significantly to the overall activity concentration. The external gamma radiation received from surface soil in the area is generally low, with an average of 0.07 mSv/y. The highest annual effective doses were estimated from the tailings dams and the levels varied between 0.14 mSv/y and 1.09 mSv/y, with an average of 0.51 mSv/y. In certain locations the recommended dose constraint of 0.25 mSv/y from a single source to the average member of the public within the exposed population was exceeded indicating the need for further monitoring and regulatory control measures specific to these areas to ensure protection of resident members of the public.

### Apply to be considered for a student ; award (Yes / No)?

No

### Level for award;(Hons, MSc, PhD, N/A)?

No

### Consent on use of personal information: Abstract Submission

**Primary authors:** MOSHUPYA, Paballo (National Nuclear Regulator); Dr ABIYE, Tamiru (University of the Witwatersrand); Dr KORIR, Ian (National Nuclear Regulator)

**Presenter:** MOSHUPYA, Paballo (National Nuclear Regulator)

**Session Classification:** Nuclear, Particle and Radiation Physics

**Track Classification:** Track B - Nuclear, Particle and Radiation Physics
