A mechanistic non-process dependent study of the prediction and optimization of mineral beneficiation and metal extraction.

Tuesday, 4 July 2023 15:41 (1 minute)

Abstract. Process prediction and optimisation have been regularly conducted in physical systems. While most of the tools used require the introduction and analysis of input–output parameters, often ranges of values are required. The observed non-personalisation of the range of input parameters and the obtained outcome values in the metallurgical processes has prompted the content of this paper. For the same range of values introduced into the input layer of an artificial neural network frame, with the very same weight and boundary conditions would lead exactly to the same outcomes interpretation of which is process dependent. The paper will discuss the case of concentration of sulphide minerals through flotation compared to the case of the dissolution of cobalt-bearing minerals in an acid solution before ending with the calcination and roasting of a sulphide. A demonstration of the non-specification of the outcome of the physical systems will be discussed.

Apply to be considered for a student ; award (Yes / No)?

Yes

Level for award;(Hons, MSc, PhD, N/A)?

MEng.

Consent on use of personal information: Abstract Submission

Primary author: Mr MVITA, META (Mineral Processing and Technology Research Centre, Department of Metallurgy, School of Mining, Metallurgy and Chemical Engineering, Faculty of Engineering and The Built Environment.)

Co-author: Prof. MULABA-BAFUBUAMDI, Antoine F. (Mineral Processing and Technology Research Centre, Department of Metallurgy, School of Mining, Metallurgy and Chemical Engineering, Faculty of Engineering and The Built Environment, University of Johannesburg, PO Box 17911, Doornfontein, Johannesburg 2028, South Africa. Department of Mining Engineering, School of Engineering, College of Science, Engineering and Technology, University of South Africa, Florida, South Africa.)

Presenter: Mr MVITA, META (Mineral Processing and Technology Research Centre, Department of Metallurgy, School of Mining, Metallurgy and Chemical Engineering, Faculty of Engineering and The Built Environment.)

Session Classification: Poster Session 1

Track Classification: Track A - Physics of Condensed Matter and Materials
