## Klein-Gordon energy states of SCP under Plasma medium

*Thursday, 21 November 2024 16:45 (15 minutes)*

This study investigates the influence of plasma screening on the relativistic behavior of a hydrogen-like atomic system through the application of a screened Coulomb potential. By accurately solving the Klein-Gordon equation in spherical coordinates, under the assumption that the scalar and vector potentials are equivalent, we get the self-energy spectrum of our system along with its corresponded wave functions.
