## The confinement of Graphene nanosheets in an isolated one dimensional system

With freakishly mobile electrons that can blaze through the material at nearly the speed of light, 100 times faster than electrons can move through silicon, and its amazing mechanical properties, graphene became the rise of future mecha and optoelectronic. The main goal of this work is to confine Graphene nanosheets in polymeric 1-D systems.

**Primary author:** Mr KHENFOUCH, MOHAMMED ((1)Faculty of Sciences Dhar el Mahraz, Lab. of solid state physics, Polymers and nanomaterials group , BP 1796 Atlas Fez 30 000.(2) Nanoscience Laboratories, Materials Physics Dept., iThemba LABS-National Research Foundation, P O Box 722, Somerset West 7129, Faure, South Africa)

**Co-authors:** Prof. AARAB, HASSANE (Faculty of Sciences Dhar el Mahraz, Lab. of solid state physics, Polymers and nanomaterials group , BP 1796 Atlas Fez 30 000); Prof. MAAZA, MALEK ((2) Nanoscience Laboratories, Materials Physics Dept., iThemba LABS-National Research Foundation, P O Box 722, Somerset West 7129, Faure, South Africa); Prof. BAÏTOUL, MIMOUNA ((1)Faculty of Sciences Dhar el Mahraz, Lab. of solid state physics, Polymers and nanomaterials group , BP 1796 Atlas Fez 30 000)

**Presenter:** Mr KHENFOUCH, MOHAMMED ((1)Faculty of Sciences Dhar el Mahraz, Lab. of solid state physics, Polymers and nanomaterials group , BP 1796 Atlas Fez 30 000.(2) Nanoscience Laboratories, Materials Physics Dept., iThemba LABS-National Research Foundation, P O Box 722, Somerset West 7129, Faure, South Africa)

**Track Classification:** Track A - Condensed Matter Physics and Material Science
