Detecting Lightning Distribution Changes using Satellite Imagery

Tuesday, 9 July 2013 11:30 (20 minutes)

Abstract content
 (Max 300 words)

The distribution of lightning across the Earth's surface varies both with location and time. Seasonal changes in lightning activity recorded in Low Earth Orbit (LEO) satellite data have been studied by various authors, who used classical time series analysis techniques. We present an alternative analysis based on automated pattern recognition, which identifies the changing state of lightning distributions using computer vision techniques. Due to the large quantity of data available, machine learning algorithms were the most efficient way of achieving our goals. This model not only has significant application in the analysis of historical lightning data but also in the forecasting of future lightning distributions.

Apply to be
 considered for a student
 award (Yes / No)?

Yes

Level for award
 (Hons, MSc,
 PhD)?

Hons

Main supervisor (name and email)
and his / her institution

Andrew B. Collier
collierab@gmail.com

Would you like to
 submit a short paper
 for the Conference
 Proceedings (Yes / No)?

No

Primary author: Ms BOOYSENS, Aimee (SANSA Space Science)

Co-authors: Mr COLLIER, Andrew B (SANSA Space Science); Mr VIRIRI, Serestina (University of Kwa-Zulu Natal)

Presenter: Ms BOOYSENS, Aimee (SANSA Space Science)

Session Classification: Space Science

Track Classification: Track D2 - Space Science
