Type: Oral Presentation

Looking for an influence of antineutrinos on a beta plus source- long term measurements at Koeberg power station.

Tuesday, 8 July 2014 10:20 (20 minutes)

Abstract content
 (Max 300 words)

Using radioactive sources as detectors for neutrinos has the advantage of being thresholdless. The decay of a ^{22}Na beta plus source some 17 m from a reactor core at the Koeberg power station has been observed for more than a year and over two outages. Results will be presented from these measurements.

Apply to be considered for a student award (Yes / No)?

No

Level for award (Hons, MSc, PhD)?

No

Would you like to submit a short paper for the Conference Proceedings (Yes / No)?

No
