Systematic Study of Up-Conversion Luminescence in NaYF₄:Yb³⁺,R³⁺

Wednesday, 6 May 2015 13:30 (1h 30m)

In up-conversion luminescence, the absorption of two or more low energy photons is followed by the emission of a high energy photon. NaYF₄:Yb³⁺,R³⁺ (R: Pr, Nd, Sm, Eu, Tb, Dy, Ho, Er or Tm) materials were prepared to study up-conversion luminescence. The materials were studied with TG-DSC, FTIR and XPD methods. Up-conversion luminescence was studied with NIR laser excitation at 976 nm. The DSC curves showed an exothermic signal at 400-500 °C due to the cubic-to-hexagonal phase transition of NaRF₄. The TG curves showed only small mass losses (ca. 2-4 %) during heating to 500 °C. The FTIR spectra did not reveal other impurities apart from water absorbed in the KBr discs. The XPD patterns confirmed the hexagonal structure of the annealed materials. The up-conversion luminescence was observed of Pr³⁺, Nd³⁺, Eu³⁺, Tb³⁺, Ho³⁺, Er³⁺ and Tm³⁺. The up-conversion luminescence was not obtained of Sm³⁺ and Dy³⁺.

Are you currently a postgraduate student? (Yes/No)

yes

At what level of studies are you currently? (Hons/MSc/PhD)

MSc

Please provide the name and email address of your supervisor.

Mika Lastusaari, miklas@utu.fi

Primary author: Mr LAIHINEN, Tero (University of Turku, Department of Chemistry, Turku, Finland)

Co-authors: Prof. HÖLSÄ, Jorma (University of Turku, Department of Chemistry, Turku, Finland); Dr PIHLGREN, Laura (University of Turku, Department of Chemistry, Turku, Finland); Prof. RODRIGUES, Lucas (Universidade de São Paulo, Instituto de Química, São Paulo-SP, Brazil); Dr LASTUSAARI, Mika (University of Turku, Department of Chemistry, Turku, Finland)

Presenter: Mr LAIHINEN, Tero (University of Turku, Department of Chemistry, Turku, Finland)

Session Classification: Poster

Track Classification: SACPM
