## First implementations of new monitoring capabilities as extension to the e-RemoteCtrl software

*Monday, 14 March 2016 15:45 (1 hour)*

A new release of the telescope control software e-RemoteCtrl, which is designed to run VLBI observations remotely, has been extended with new monitoring capabilities.

The software extension is a test for further monitoring and control infrastructures for complete VLBI networks. The poster shows Ideas and already implemented elements.
