Conductivity crossover in hot filament CVD grown nano-crystalline diamond films doped with nitrogen.

Wednesday, 13 July 2011 11:15 (15 minutes)

<p>We report on the synthesis and electrical characterization of nano-crystalline diamond films grown by hot filament chemical vapor deposition. Low temperature magnetoresistance measurements have shown a crossover in conductivity from hopping, activated to semi-metallic conduction as the nitrogen level in the CVD chamber is increased from 10

**Level (Hons, MSc,
 PhD, other)?**

MSc

**Consider for a student
 award (Yes / No)?**

Yes

**Would you like to
 submit a short paper
 for the Conference
 Pro-
ceedings (Yes / No)?**

No
