## Conductivity crossover in hot filament CVD grown nano-crystalline diamond films doped with nitrogen.

*Wednesday, 13 July 2011 11:15 (15 minutes)*

We report on the synthesis and electrical characterization of nano-crystalline diamond films grown by hot filament chemical vapor deposition. Low temperature magnetoresistance measurements have shown a crossover in conductivity from hopping, activated to semi-metallic conduction as the nitrogen level in the CVD chamber is increased from 10

**Level (Hons, MSc, &nbsp; PhD, other)?**

MSc

**Consider for a student &nbsp; award (Yes / No)?**

Yes

**Would you like to &nbsp; submit a short paper &nbsp; for the Conference &nbsp; Proceedings (Yes / No)?**

No
