Nanostructured zinc oxide (ZnO) nanorods were synthesized using an easy, low cost and low temperature chemical bath deposition (CBD) technique on glass substrate. ZnO thin films were prepared using ethanol as a solvent and zinc acetate ( $\text{Zn}(\text{CH}_3\text{COO})_2 \cdot 2\text{H}_2\text{O}$ ) as a solute, and then used as seed layer template for the subsequent growth of ZnO nano-rods. The growth solution consists of zinc nitrate hexahydrate ( $\text{Zn}(\text{NO}_3)_2 \cdot 6\text{H}_2\text{O}$ ) and hexamethylenetetramine (HMT). The influence of different concentrations of hexamethylenetetramine on the structural and morphological properties of ZnO nanorods were investigated using X-ray diffraction (XRD) and scanning electron microscope (FE-SEM), respectively. For additional characterization of the ZnO NRs, surface topography measurements were performed using Atomic Force Microscope (AFM). XRD patterns of the ZnO nanorods grown using CBD at  $60^\circ\text{C}$  for four hours shows a remarkably strong diffraction peak at the (002) plane indicating that all the ZnO nanorods possessed pure hexagonal wurtzite structures. SEM images revealed the changes in morphology of ZnO nanorods upon addition of different amounts of hexamethylenetetramine.

**Apply to be considered for a student award (Yes / No)?**

Yes

**Level for award (Hons, MSc, PhD, N/A)?**

PhD

**Main supervisor (name and email) and his / her institution**

Mmantsae Moche Diale  
mmantsae.diale@up.ac.za  
Department of Physics  
University of Pretoria

**Would you like to submit a short paper for the Conference Proceedings (Yes / No)?**

No

**Please indicate whether<br>this abstract may be<br>published online<br>(Yes / No)**

No

**Primary author:** Mr MWANKEMWA, Benard Saamwel (University of Pretoria)

**Presenter:** Mr MWANKEMWA, Benard Saamwel (University of Pretoria)

**Session Classification:** Poster Session (1)

**Track Classification:** Track A - Division for Physics of Condensed Matter and Materials
