Enhanced properties of thermoelectric materials for technological applications

Wednesday, 6 July 2016 16:10 (1h 50m)

Abstract content (Max 300 words) **Formatting & Special chars**

Energy harvesting requires clean and highly efficient energy conversion technologies. Thermoelectricity is one such technology that achieves thermal-to-electric conversion and vice versa. This is achieved purely by solid state means and has a great potential for applications in waste heat recovery, air conditioning and spot cooling of electronic devices. Attempts have been directed towards exploration of high performance compounds which are yet to be realized. To predict the enhanced electronic structure of Cadmium Oxide (CdO), we doped it with Zn and Mn. The structural properties in terms of volumes and lattice parameters, the band structure and the density of state for both the doped and undoped CdO were determined by the modern ab initio methods based on density functional theory (DFT).

Apply to be considered for a student award (Yes / No)?

No

Level for award (Hons, MSc, PhD, N/A)?

N/A

Would you like to submit a short paper for the Conference Proceedings (Yes / No)?

yes

Please indicate whether this abstract may be published online (Yes / No)

Yes

Primary author: Dr MANYALI, George S. (Masinde Muliro University of Science and Technology, Kakamega, Kenya)

Presenter: Dr MANYALI, George S. (Masinde Muliro University of Science and Technology, Kakamega, Kenya)

Session Classification: Poster Session (2)

Track Classification: Track G - Theoretical and Computational Physics
