Brillouin scattering study on the opto-acoustic anisotropy of SrF₃

Wednesday, 5 July 2017 17:10 (1h 50m)

The elastic anisotropy of transparent polymer films and layers can be investigated nondestructively using Brillouin scattering techniques. In this study, an application of Reflection Induced Θ A scattering (RIOA) technique is introduced. In this geometry, we can simultaneously obtain RIOA scattering and back scattering peaks in one frequency spectrum. Because the shift frequency of 180 scattering peaks are dependent on the refractive index, one can deduce the information of optical anisotropy (birefringence) by comparing the RIOA and back scattering peaks. Making use of this idea, the elastic and optical properties (birefringence) of a strontium fluoride (SrF₃) crystal are investigated. The refractive index of the SrF₃ was then estimated using Brillouin scattering results from this isotropic plane.

Apply to be considered for a student award (Yes / No)?

Yes

Level for award (Hons, MSc, PhD, N/A)?

MSc

Main supervisor (name and email) and his / her institution

Name: Bhekumusa Mathe

Email: Bermuda.Mathe@wits.ac.za

Institute: School of Physics University of Witwatersrand

Would you like to submit a short paper for the Conference Proceedings (Yes / No)?

N

Primary authors: Dr MATHE, Bhekumusa (University of the Witwatersrand); Dr WAMWANGI, Daniel (wits university); DUBE, Hlosani (Wits Masters Student)

Presenter: DUBE, Hlosani (Wits Masters Student)

Session Classification: Poster Session 2

Track Classification: Track A - Division for Physics of Condensed Matter and Materials
