# Power series expansion of the Jost function on the complex angular momentum plane.

Tuesday, 4 July 2017 11:30 (20 minutes)

The aim of this research is to develop a method for expanding the Jost functions as a Taylor-type power series on the complex angular momentum plane. From this method in conjunction with the Watson transformation, we were able to express the scattering amplitude as a sum of the background and pole terms, furthermore, this method proposes a way of evaluating, numerically, the pole term. To demonstrate how this method may be applied, we considered the Born approximation. We found out that the developed method improved the Born approximation at large scattering angles. Therefore, this method is useful when the differential cross section of the background term fails to converge to that of the exact differential cross section at large scattering angles.

### Apply to be<br> considered for a student <br> &nbsp; award (Yes / No)?

Yes

### Level for award<br>&nbsp;(Hons, MSc, <br> &nbsp; PhD, N/A)?

MSc

#### Main supervisor (name and email)<br>and his / her institution

Name : Prof. Sergei Rakitianski email : Sergei.Rakitianski@up.ac.za Institution : University of Pretoria

## Would you like to <br> submit a short paper <br> for the Conference <br> Proceedings (Yes / No)?

Yes

Primary author: Mr TSHIPI, Tshegofatso (University of Pretoria)

Presenter: Mr TSHIPI, Tshegofatso (University of Pretoria)

Session Classification: Theoretical and Computational Physics 1

Track Classification: Track G - Theoretical and Computational Physics
