Overtaking collisions of small-amplitude supersolitons in a plasma with cold ions and two-temperature Boltzmann electrons

Friday, 7 July 2017 10:20 (20 minutes)

Solitons are spatially localized solitary waves that propagate without changing shape or velocity, and arise as bipolar structures in the electric field. A special class of solitons have recently been reported, namely supersolitons [1]. Supersolitons are deformed solitons with additional local minima and maxima in the electric field, giving rise to so-called “wiggles in the tails”. Supersolitons have been predicted theoretically in many different plasma models. It was also shown to be stable via fluid simulations [2]. However, the collision properties have not been considered. In this paper, we use a reductive perturbation analysis to study supersolitons in a plasma consisting of cold ions and two-temperature Boltzmann electrons. A Korteweg-deVries-type equation is derived that governs small-amplitude supersolitons. This equation is used to simulate supersoliton collisions, in order to determine the properties of overtaking soliton-supersoliton and supersoliton-supersoliton collisions.

Summary

We use a reductive perturbation analysis to study supersolitons in a plasma consisting of cold ions and two-temperature Boltzmann electrons. A Korteweg-deVries-type equation is derived that governs small-amplitude supersolitons. This equation is used to simulate supersoliton collisions, in order to determine the properties of overtaking soliton-supersoliton and supersoliton-supersoliton collisions.

Apply to be considered for a student award (Yes / No)?

No

Level for award (Hons, MSc, PhD, N/A)?

N/A

Main supervisor (name and email) and his / her institution

Dr. Du Toit Strauss
North-West University

**Would you like to
 submit a short paper
 for the Conference
 Proceedings (Yes / No)?**

No

Primary author: Dr OLIVIER, Carel (North-West University)

Co-author: Prof. VERHEEST, Frank (University of Ghent)

Presenter: Dr OLIVIER, Carel (North-West University)

Session Classification: Space Science

Track Classification: Track D2 - Space Science
